

Dad locked out of his iPad for 48 years!

Evan Osnos, a journalist in the US, has been locked out of his iPad for over 48 years after his 3-year-old entered to wrong password a lot of times!

Posting a picture of the bizarre iPad display, Mr Osnos wrote: "Uh, this looks fake but, alas, it's our iPad today after 3-year-old tried (repeatedly) to unlock. Ideas?"

The father's Twitter followers soon offered some words of wisdom.

"Next time just give the kid the passcode," wrote one user.

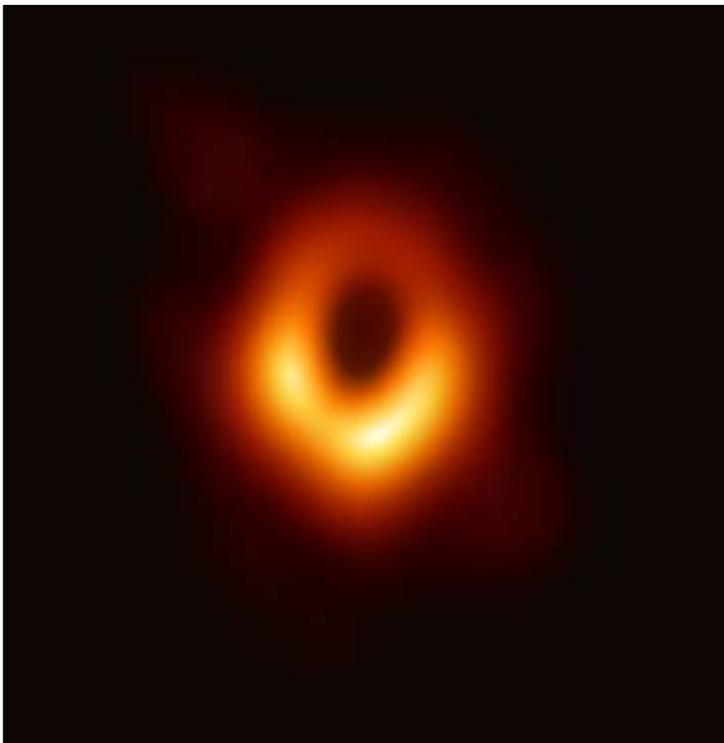

"I would just wait it out," added another.

"Time travel seems to be your best bet." One follower joked.

First image of a black hole is released

Pictured: The first image of a black hole taken from the Event Horizon 'Scope Twitter page.

Scientists have obtained the first image of a black hole, using Event Horizon Telescope (EHT) observations of the centre of the galaxy M87.

EHT is made of up eight independent observatories that are scattered across the globe, cooperating to act as one enormous detector.

The image shows a bright ring formed as light bends in the intense gravity around a black hole that is 6.5 billion times bigger than the Sun!

A black hole is a place where a large amount of mass has been squeezed into a tiny space. The gravity is so strong that not even light can escape from a black hole. Because no light can get out, people can't see black holes. They are invisible. Space telescopes with special tools can help find black holes.

Unicorn day was celebrated!

Pictured: A typical image of a Unicorn.

A seven-year-old, who passes a large IKEA on her way to school in Melbourne each day, wrote to the store to ask them to change their “boring” yellow and blue flags to some that she had designed. The flags she suggested were much more colourful and included drawings of unicorns saying the word “IKEA”.

The store manager replied saying 'We think you are right; they are a bit boring. We actually really love unicorns too, and we loved your idea so much we've decided to make a whole day out of it and celebrate Unicorn Day with the new flag.' The store will fly the new flags for two weeks. National Unicorn Day is on April 9th every year. It was created to celebrate these majestic creatures and help adults remember how much more fun life can be when we let a little magic in sometimes.

Unicorns are the official national animal of Scotland and feature on the royal coat of arms. They have been a popular mythical creature since the Ancient Greek times, when people believed they lived in India.

Has Mount Everest shrunk?

A Nepalese team are going to measure Mount Everest amid concerns it has shrunk following an earthquake that took place in 2015.

Shifting tectonic plates are believed to have altered the height of some areas in Nepal by up to 9 metres.

Once they reach the top of the mountain the team will use a new Global Navigation Satellite System that can send readings about its height to colleagues who will remain at base camp. They believe the device will allow them to accurately measure the height of Everest to the nearest centimetre.

Everest is the world's highest peak standing at 8848 meters above sea level. It is over 60-million-years-old!
